Figure 1: Schematic representation of the experimental design. The figure shows a timeline of events for two groups: 'Control' and 'Experimental'. The Control group receives a single injection of saline (0.9% NaCl) at 0h. The Experimental group receives a single injection of saline at 0h and a second injection of saline at 2h. Both groups are then subjected to a 2h period of hypothermia (15°C) starting at 2h. The timeline ends at 4h. The Experimental group shows a significant increase in the number of cells in the hippocampus (CA1, CA2, CA3, and DG) compared to the Control group at 4h.

※ L. SENSOR () U. SENSOR ()

[illegible][illegible]

A diagram of a 4x16 grid of squares. The top row has two black squares at positions 8 and 9, with the letters 'O' and 'O' above them. The remaining squares are white.

Figure 1 shows a 4x20 grid of rectangles. The bottom row is labeled 'L. SENSOR' and the top row is labeled 'U. SENSOR'. A circle is placed in the 10th column of the 3rd row from the bottom. The rectangles are arranged in a pattern that tapers from left to right, with the top row having 18 rectangles and the bottom row having 20 rectangles.
